***Allowable Subject Matter***

1. As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).
2. The following is a statement of reasons for the indication of allowable subject matter: The most relevant prior art of reference is that of Japanese abstract 10291896A. However, it does not teach nor fairly suggest singularly or in any combination thereof an apparatus for pulling single crystals, wherein the know device has a heater made out of a flexible carbon-containing material in the form of a cylinder, whose ends are secured between coaxially arranged rigid rings made of a carbon material, and connected to a power source, and also by determining the thickness of the heater wall by the equation:

$$\delta * \rho * c = 500-8599 \text{ J/m}^2$$

$\delta$  is the thickness of the wall of the heater, in m;

$\rho$  is the density of the material of which the heater is made, in kg/m<sup>3</sup>

c is the specific heat capacity (at working temperature), J/kg\*K, of the material of which the heater is made.
